Title: Rautomead to supply fourth copper rod casting machine to Serbia

Release Date: April 2008

Continuous casting technology specialists, Rautomead Limited, of Dundee, Scotland, have secured an order from Metalka Majur, of Serbia, to supply an RS 3000/6 upwards-vertical continuous casting machine.

This will become the fourth Rautomead copper rod casting machine to be installed in Serbia, reflecting the importance of the country's copper processing industry.

The RS 3000/6 model will be used to produce high quality 8mm oxygen-free copper rod at a brand new manufacturing facility that is being established by Metalka at Jagodina, a municipality approximately 90 minutes' drive south-east of Belgrade.

Metalka already manufactures a range of modern electrical switchgear and the move into cable-making is a major expansion for the company.
